PRAKALESH NANTH M

prakaleshn@gmail.com 7200693480 Chennai

Summary

IT Professional with a strong foundation in **Networking, Cybersecurity,** and **System Administration.** Proficient in configuring and troubleshooting complex network architectures using advanced routing and switching protocols. Hands-on experience in cybersecurity principles, including threat analysis, web application vulnerability assessment (OWASP), and hands-on offensive security practice via CTFs and security labs. Adept at Linux system administration and rapid system troubleshooting to ensure optimal infrastructure performance and security.

Education

BE - Computer Science (Cyber Security), *Dhanalakshmi Srinivasan Engineering College* 2022 – 2026

Internship Experience

Daphne Infotech Feb 2026 – Jul 2026
Network Support Chennai

- Assisted in configuring Cisco routers and switches for LAN network environments.
- Performed IP configuration, VLAN setup, and subnetting tasks. Supported implementation of routing protocols such as RIP, EIGRP, and OSPF
- Assisted in troubleshooting network connectivity and LAN/WAN issues.

Hardware & System Support

- Installed and configured Windows operating systems and software applications.
- Assembled desktop systems and performed hardware diagnostics and maintenance.
- Configured printers, Outlook email setup, and internet connectivity.

Server Administration

- Assisted in installing and configuring Windows Server environments.
- Supported Active Directory configuration and user management tasks.
- Participated in network backup and system security procedures.

Cybersecurity Intern | Novitech | July 2024

- Conducted basic network scanning and packet analysis using Nmap and Wireshark.
- Applied web application security concepts by performing directory enumeration and traffic interception with Gobuster and Burp Suite.

Cybersecurity Intern | Hackup Technology | July 2025 – Sep 2025

Mar 2026 – May 2026

- Completed extensive web vulnerability labs via PortSwigger Academy and Hack The Box, successfully exploiting SQLi, XSS, path traversal, and authentication bypasses.
- Executed wireless network testing by simulating Evil Twin attacks and utilizing ESP8266 hardware modules for network disruption.
- Applied core security frameworks (CIA Triad) while utilizing Kali Linux tools like Nmap and Gobuster for network enumeration and directory brute-forcing.

Technical Skills

Networking — TCP/IP, IP Addressing, Subnetting LAN / WAN Configuration VLAN Configuration STP / RSTP

Routing Protocols — RIP, EIGRP, OSPF DHCP Configuration Basic VPN Concepts

Cisco Technologies — Cisco Router Configuration Cisco Switch Configuration VLAN Creation & Inter-VLAN Routing Telnet / Remote Access Configuration

Hardware & System Support — Desktop Assembly & Troubleshooting OS Installation (Windows XP / 7 / 10 / 11) Printer Installation & Configuration System Maintenance & Virus Removal

Networking Tools — Crimping (Straight & Cross Cable) Network Troubleshooting Basic Network Monitoring

Penetration Testing & VAPT - Web App Pentesting, OWASP Top 10, OSINT (Recon-ng), Secure Code Review

Skills

- Quick learner
- Teamwork and collaboration
- Time management
- Adaptability
- Attention to detail
- Analytical thinking
- Willingness to learn new technologies
- Positive attitude
- Responsibility and accountability

Projects

Web Based Bug Bounty Toolkit

- Developed a lightweight, static web application designed to automate early-stage penetration testing and reconnaissance tasks. Integrated core security functionalities including **subdomain enumeration**, **directory/path traversal detection**, and **port scanning** into a user-friendly interface to streamline vulnerability assessment workflows.

Declaration

I hereby declare that all the information furnished in this resume is genuine and accurate to the best of my knowledge. I assure that the details provided are true and complete.
